To become death in Venetica is a calling, fulfilled by a man of flesh and blood – equipped with special supernatural skills in order to be able to carry out the duties of the office. A new death is selected regularly by “Corpus”, a secret council. This time however Corpus really makes a wrong decision: The “new” death, Victor, turns out to be a crazed necromancer who manages to turn himself into an overpowering undead with seedy tricks and dark rituals and thus attains almost unlimited power in addition to immortality. As it is strictly forbidden for the chosen death to devote himself to necromancy, the committee revokes Victor’s nomination immediately and declares a new death in his stead without delay.

The power-hungry Victor however does not want to relinquish his position again. He continues to practice the dark arts in order to gather numerous dark and dangerous creatures and tainted souls from the underworld around him. He thus succeeds in eliminating the newly designated death and takes over his power for his own purposes. The effects on the world’s balance are calamitous and – should Victor be able to keep himself in power – its dark consequences are irreversible. Only a person who has the same mighty powers as Victor can prevent his prevailing and vent him his deserved punishment.

Scarlett, the daughter of the real death does not know anything about her ancestry and the hidden talents which slumber within her. She is immersed suddenly in this story due to the brutal attack on her home village and the tragic loss of Benedict, the love of her life. It is a story which she now begins to write herself, a story during the course of which she unleashes her capabilities, a story in which she tries to save Benedict from the world of the dead and a story in which she must protect the world of the living from the dark threat posed by Victor and his henchmen.
